★ JAN 23 2009 ★

AutoSave also creates a log file. None was found on either the Seagate External or
the Desktop.

LONG ISLAND OFFICE

The AutoSave2.exe program was found, but it was not installed.

By default, AutoSave does not backup Deleted files, images or movies. It needs to be
manually configured to backup these types of files. It may change file and folder
names when backing up deleted files.

The default backup directory is:

Backup\"System Name"\X0\"Drive Letter"\Recycler

The folder structure of Reiners Seagate that contained the child pornography
images and movies:

X-Drive Files\2BArchive – Last Accessed 8/12/06
 \Ab-Down – Last Accessed 8/12/06

The last access date of the child pornography was 12/30/04. The folders was
8/12/06. You can view thumbnails of the images in Windows Explorer with out
changing the access dates.

No file or folder contained an access date before 12/26/04.

Mr. Reiners third step for deleting the files, which states "to follow a prompt to
delete the material permanently." Windows will prompt for removal to Recycle Bin.

MediaWiper – MediaWiper is from the same Software Company as WipeDrive. It
can "wipe" individual files or folders. MediaWiper was found on the Seagate
External along with Encase, FTK and AutoSave2.
